

Mark49152's Two-Sided PLL Recognition Guide

V 2014.05.31

- Look for these features in order of precedence: (1) 3-bar (2) lights (3) 2-bar (4) bookends.
- Choose the first pattern that matches, from the nine patterns below, and within that group find the first case that matches.
- Remember that there are four color combinations for each case, and cases may also be mirrored.
- Color rules are relative: "opp" = opposite, "adj" = adjacent, relative to the nearest pattern color.

<p>3-BAR</p>  <p>headlights = U</p> <p>2-bar = J</p> <p>4 colors = F</p>	<p>DOUBLE LIGHTS</p>  <p>2-color 6-checker = Z</p> <p>adj edges & 4 colors = Z</p> <p>opp edges = H</p> <p>2:1 pattern & 3 colors = U</p>	<p>LIGHTS + 2-BAR</p>  <p>inside bar & 3 colors = T</p> <p>inside bar & 4 colors = R</p> <p>outer bar & 3 colors = A</p> <p>outer bar & 4 color = Ga/c</p>
<p>LONE LIGHTS</p>  <p>5-checker = R</p> <p>4-checker = Ga/c</p> <p>lights enclose opp = Gb/d</p> <p>lights enclose adj (but no checker) = A</p>	<p>DOUBLE 2-BAR</p>  <p>both outside = Y</p> <p>both inside & bookends = A</p> <p>inside & no bookends = V</p> <p>same side & bookend = J</p> <p>same side & no bookend = N</p>	<p>OUTSIDE 2-BAR</p>  <p>no bookend = V</p> <p>adj appears twice = R</p> <p>opp appears twice = Gb/d</p> <p>adj by bar & 4 colors = T</p> <p>opp by bar & 4 colors = A</p>
<p>INSIDE 2-BAR</p>  <p>bookends adj color = Ga/c</p> <p>bookends opp col = Gb/d</p> <p>no bookends = Y</p>	<p>BOOKENDS NO BAR</p>  <p>enclosed 4-checker = F</p> <p>adj appears twice = R</p> <p>opp appears twice = Ga/c</p>	<p>NO BOOKENDS</p>  <p>inner 4-checker = V</p> <p>outer 4-checker = Y</p> <p>5-checker w/ opp middle = E</p>

Which way to AUF?

- Use the patterns on the first page to identify the PLL case.
- There's no fixed AUF per case, as which way you AUF will depend on which PLL algorithm you use.
- For many cases, it will be obvious which way to AUF, from the patterns you can see.
- For the less obvious cases, see the hints below.
